## SKILLS

---

<b>Front End Development -</b>	ReactJS, Javascript, HTML, CSS, Redux, Typescript, Bootstrap, Tailwind CSS
<b>Back End Development -</b>	Node.js, Express, MongoDB
<b>Tools -</b>	Git, Vercel

## WORK EXPERIENCE

---

<b>MERN Stack Internship</b> LuminarTechnolab	June 2023 - November 2023
---	---------------------------

## EDUCATION

---

<b>Bsc Computer Science</b> , Calicut University	2020-2023
--	-----------

**Certificates:** [React-Workshop](#)

## PROJECTS

---

### Ecommerce-System

- **Technologies** - ReactJS, Redux, HTML, CSS, JavaScript, Bootstrap, Node.js, Express, MongoDB, Git, JWT
- **LiveDemo** - <https://ecommerce-front-gray.vercel.app/>
- **Description** - Built with React, Node.js, and MongoDB, my platform features login, signup, cart, and favorites functionalities. Users can add items to their cart for purchase and mark products as favorites. Leveraging React for UI, Node.js for authentication, and MongoDB for data management, it ensures a seamless shopping experience. [GitHub](#)

### Video-App

- **Technologies** - ReactJS, HTML, CSS, JavaScript, Bootstrap, Node.js, Express, MongoDB, Git
- **LiveDemo** - <https://video-app-kohl.vercel.app/>
- **Description** - Utilizing React for the front end and Node.js with MongoDB for the back end, my project offers a comprehensive video management system. Users can add, categorize, and track their viewing history seamlessly. The interface is designed for responsiveness, ensuring a smooth and personalized experience across devices. [GitHub](#)

### EMS-System

- **Technologies** - ReactJS, HTML, CSS, JavaScript, Bootstrap, Node.js, Express, MongoDB, Git
- **LiveDemo** - <https://ems-front-nine.vercel.app/>
- **Description** - My project is a comprehensive employee management system built using React, Node.js, and MongoDB. It provides functionalities to add, manage, search, update, and delete employee records. Users can easily navigate through the system to search for specific employees, view detailed profiles, update their information, and delete records as needed. Leveraging the power of React for the front end, Node.js for the back end, and MongoDB for data storage, the application offers a seamless and efficient solution for employee management. [GitHub](#)

### Netflix-clone

- **Technologies** - HTML, CSS, JavaScript, Bootstrap, Git
- **LiveDemo** - <https://brijin07.github.io/netflix/>
- **Description** - This project is a UI design concept netflix implemented using front-end technologies [GitHub](#)
